1980 MATHEMATICS SUBJECT CLASSIFICATION

This is a corrected reprinting of the 1980 Mathematics Subject Classification. The corrections carried out since the second printing (in the 1979 Mathematical Reviews Index) include the following:

Section 03–XX has undergone some revision; in particular, the entries 03B48, 03B65, 03C07, 03C13, 03C57, 03C62, 03C68, 03E47, 03F07 and 03F40 are new. Section 78A57 was relabeled 78A97; section 81H05 was expanded into 81Hxx, with three subheadings. The remaining new entries are: 05B07; 10A50; 17A36, 17A75, 17D15, 17D20, 17D25, 17D92; 20F17; 31C35; 35J85, 35K85, 35L85; 41A80; 53C12; 57N13, 57Q12, 57R19; 65L50, 65L60, 65M50, 65M60, 65N50; 68D22; 70K40, 70K50, 70Q05; 73C60, 73D50, 73D70, 73E50, 73K03; 76A60, 76B40, 76D07; 78A60, 78A70; 80A32; 81D30, 81E20, 81E25; 82A31, 82A43, 82A51, 82A57, 82A68; 83C47, 83E50; 86A60; 90B50. There are 40 entries in which small changes in the description or additions in the cross references were carried out.

Instructions for using the 1980 Mathematics Subject Classification

These instructions apply uniformly to all fields listed. The main purpose of the classification is to help all readers to find the items of present or potential interest to them as readily as possible—in MR, in Zbl, or anywhere else where this classification system is used. The review of a paper or book should be printed in the section where it will receive the broadest attention from all readers possibly interested in it—these include both people working in that area and people who are familiar with that area and apply its results and methods elsewhere (inside or outside of mathematics). It will be extremely useful for both readers and classifiers to familiarize themselves with the entire classification system and thus to become aware of all the classifications of possible interest to them.

Every paper or book reviewed in MR receives precisely one "primary" classification number; it is simply the number of the section in which the review of the item will be printed. This section should be the one that covers the principal contribution. When a paper contains several principal contributions in different areas, the primary classification should cover the "most important" among them. A paper or book may receive one or several "secondary" classification numbers (or "cross-references"), to cover any remaining principal contributions, ancillary results, motivation or origin of the problems discussed, intended or potential field of application, or other significant aspects worthy of notice.

The "primary" principal contribution should be the one including the most important part of the work actually done in the paper. For example, a paper whose main overall content is the solution of a problem in graph theory, which arose in computer science and whose solution is (perhaps) at present only of interest to computer scientists, should receive its primary classification in 05C and a cross-reference in 68; conversely, papers whose overall content lies mainly in computer science will receive a primary classification in 68, even if they make heavy use of graph theory and prove several new graph theoretic results along the way.

For any paper or book with its primary classification in (i.e., printed in) an "applied" section (68 through 94), it is recommended to give a cross-reference in some mathematics section(s) (00 through 65) whenever that is appropriate. Do not use 00A89 as a primary classification.

There are two types of cross-references given after many classifications in the list. The first type is of the form "{For A, see X}"; if this appears in section Y, it means that for contributions described by A one should usually assign the classification X, not Y. The other type of cross-reference merely points out related classifications; it is of the form "[See also...]", "[See mainly...]", etc., and the classifications listed in the brackets may, but need not, be added to the classification of a paper, or they may be used in place of the classification where the cross-reference is given. The classifier will have to judge which classification is the most appropriate for the paper at hand.

10–XX NUMBER THEORY {Excluding 10Axx and 10Mxx, this classification does not distinguish work in the rational number fields from that in other algebraic number fields.}

10–01 Elementary exposition, textbooks
10–02 Advanced exposition (research surveys, monographs, etc.)
10–03 Historical (must also be assigned at least one classification number from Section 01)
10–04 Explicit machine computation and programs (not the theory of computation or programming)
10–06 Proceedings, conferences, etc.

10Axx Elementary number theory {For analogues in number fields, see 12A05.}
10A05 Multiplicative structure of the integers (GCD, etc.)
10A10 Congruences, primitive roots
10A15 Power residues, reciprocity
10A20 Number-theoretic functions, related numbers; inversion formulas
10A21 Counting functions
10A22 Abstract theory of number-theoretic functions
10A25 Elementary prime number theory, factorization

10A30 Algorithms and expansions; digital properties {For metric results, see 10K10.}
10A32 Continued fractions {For approximation results, see 10F20; see also 30B70, 40A15.}
10A35 Recurrence sequences
10A40 Special numbers, sequences and polynomials (e.g. Bernoulli)
10A45 Partitions
10A50 Combinatorial number theory
10A99 None of the above, but in this section

10Bxx Diophantine equations [See also 14Gxx.]
10B05 Linear, quadratic and bilinear equations
10B10 Cubic and quartic equations
10B15 Higher degree equations
10B16 Norm form equations
10B20 Multiplicative equations
10B25 Nonpolynomial equations
10B30 Equations in sufficiently many variables [See also 10J10.]
10B35 Representation problems [See also 10J10.]
10B40 *p*-adic and power series fields
10B45 Diophantine inequalities
10B99 None of the above, but in this section

10Cxx Forms (especially quadratic) {For quadratic forms in linear algebra, see 15A63.}
10C01 Forms over general fields (especially quadratic)
10C02 Forms over global rings and fields (especially quadratic)
10C03 Forms over local rings and fields (especially quadratic)
10C04 Forms over real fields
10C05 Quadratic, bilinear and Hermitian forms [See also 10E25.], general theory (including Witt rings of quadratic forms)
10C07 Class numbers of quadratic and Hermitian forms
10C10 Higher degree forms
10C15 Analytic theory (Epstein's zeta function; relations with automorphic forms and functions)

ERRATA AND ADDENDA

54 #10924: Jakimovski, A.; Russell, D. C.
The following should be substituted for the original review:
Authors' summary: "It is the first purpose of this paper to obtain simple order conditions which hold for certain sequences of continuous linear functionals on a Fréchet space with a Schauder basis, and to investigate best-possible order conditions. We then specialize the results to Banach spaces and to summability fields of matrices. By using results on summability fields and absolute summability fields of Riesz typical means and generalized Cesàro means, some of them new, we are able to obtain some best-possible order conditions in these fields; in particular, we can specify the best-possible limitation theorems for a sequence (or series) which is limitable, or absolutely limitable, by the Riesz method. We then apply our limitation theorems to obtain two equivalence theorems, of 'high-indices' type, for ordinary and absolute Riesz summability. Finally, we can obtain improved forms of two inclusion theorems which specify necessary and sufficient conditions for an arbitrary matrix method to include the ordinary or absolute Riesz methods."

58 #22756: Grigor'eva, N. S.
Several lines were inadvertently omitted from the review. The full text of the review should read as follows:
"The author considers two ordinary differential equations with the real parameter λ: the Mathieu equation $d^2y/d\eta^2+h^2(\sin^2\eta-\lambda)y=0$, $0\leqslant\eta\leqslant 2\pi$, and the modified Mathieu equation $d^2H/d\xi^2+h^2(\sinh^2\xi+\lambda)H=0$, $0\leqslant\xi<+\infty$. Using the method of so-called model equations, she gives the uniform asymptotic expansions for $h\to+\infty$ of the exponentially decreasing solutions $H_\lambda^{\pm}(\xi)$ of the modified Mathieu equation and of the Floquet solutions $y_\lambda^{\pm}(\eta)$ of the Mathieu equation."

The results of the present paper do not actually follow directly from the paper by Zakharin referred to in the review.

80a:10036: Orde, H. L. S.
The reviewer's assertion that "the main steps of the proof are the same as in the classical proof of Dirichlet, and the proof is more analytic than arithmetic" is questionable. His assertion that "an elementary and purely arithmetic proof of Dirichlet's class number formula was given by B. A. Venkov" is incorrect, since Venkov's proof was not intended to cover all cases.
The author states in his introduction:
"We propose here to give a quite different and much shorter arithmetic proof which applies to all negative discriminants. The main interest of this proof lies perhaps in the fact that it provides an intuitive explanation for the structure of Dirichlet's expression, because the result is obtained almost immediately without the need for any of the intermediate transformations which occur in the usual proofs, even if a certain amount of detail of a routine kind is needed to confirm that the arguments which are suggested by intuition are valid."

Lines 5–10, beginning with "A semigroup S is (1)" and ending with "(that is, $AS=SA=A$), respectively", should read: "A semigroup S is (1) a semilattice of groups, (2) a semilattice of left groups and (3) a homogroup if and only if (a) $B(S)$ is a regular monoid, (b) $B(S)$ is a regular semigroup having S as a right identity and (c) $B(S)$ has a zero element, respectively. The bi-ideal semigroup $B(S)$ of a semigroup S is a monoid if and only if (i) every A of $B(S)$ is a two-sided ideal of S, and (ii) every two-sided ideal I of S is complete (that is, $IS=SI=I$)."

Unfortunately the review of paper 80a:52004 by Jorge H. Nanclares and Fausto H. Toranzos was erroneously reprinted as the review of the above paper by R. J. Clarke. In fact Clarke's paper is totally unrelated to that of Nanclares and Toranzos. Clarke's paper deals instead with the sequence of polygons obtained from a given one by iterating the operation of replacing a polygon by the polygon whose vertices are the midpoints of the sides of the previous one. Other ratios of subdivision of the sides of a polygon other than bisection are also considered.

In line 6 "equilateral" should read "isosceles". For an earlier proof of $f(3)=8$, see articles by H. Croft [Proc. London Math. Soc. (3) **12** (1962), 400–424; ibid. (3) **13** (1963), 384; MR **27** #5167ab].

80e:20080: **Länger, H.**
In line 6 "$\leqslant$" should read "$=$". In line 8 "$G\in G(2,n)$" should read "a 2^n-element groupoid G belongs to $G(2,n)$".

80e:93132: **Bismut, Jean-Michel**
Augment the review as follows:
"The paper is a detailed account of the optimal control problem for a particular stochastic differential equation. The paper contains material on convex functions, stochastic integrals, stochastic linear differential equations with associated dual equations, and on optimal stochastic integrals."

80f:05025: **Gluhov, A. D.**
The title of the article should read: "A refutation of Ringeisen's conjectures". In line 11 of the review replace "assumed" by "conjectured" and in line 16 "assumptions" by "conjectures".

80f:20025 **Fenchel, Kate**
There is a serious typographical error; the conclusion "$(n,|G|/n)\neq 1$" in the review should read "$(n,|G|/n)=1$". The author proves Frobenius' conjecture in the case $(n,|G|/n)\neq 1$.

80f:42001ab: **Harmonic analysis in Euclidean spaces. Parts 1, 2.**
The paging should read as follows: Part 1, xxvi+460 pp.; Part 2, vii+438 pp.

80f:93100: **Sawaragi, Yoshikazu; Soeda, Takashi; Ōmatu, Shigeru [Omatu, Sigeru]**
The bracketed form of the third author's name should read "[Ohmatsu, Shigeru]".

1980 Midyear Index
On page 28 the columns should be exchanged.

80g:08003: **Aragane, Kenichi; Fujiwara, Tsuyoshi**
The review should have mentioned the paper of W. Taylor [Canad. J. Math. **28** (1976), no. 1, 50–62; MR **53** #5435].

80g:10008: **Wooldridge, Kent**
In the last line "$3-\sqrt{2}$" should read "$3-2\sqrt{2}$".

80g:55017: **Harper, John R.**
In the last line "MR 80d:570016" should read "MR 80d:57001b".

80g:58049: **Pinsky, Mark A.**
The author's main result should read "$\inf_M(G_r/G)\leqslant 2\lambda_1^{1/2}\leqslant\inf_{\theta\in[0,2\pi]}\limsup_{r\to\infty}(G_{rr}/G_r)$".

80g:90103: **Gal, Tomas**
The name of the author of the foreword to this book should read "H.-J. Zimmermann".

80h:04001: **Landraitis, Charles**
The rankings of the representations $\cdots+1+1+1+\omega$ and $\omega^*+1+1+1$ of $\omega^*+\omega$ were given incorrectly in the original review. The ranking of $(\cdots+1+1+1+\omega)$ is $(2,\omega^*)$ and of $\omega^*+1+1+1+\cdots$ is $(2,\omega)$ and both are greater than the minimal ranking $(2,2)$ of $\omega^*+\omega$ obtained from the representation $\omega^*+\omega$. The relation $<'$ defined on p. 405 of the original article is well defined.

80h:04005: **Nosel, Eva**
The assertion that $\alpha\to(\beta_0,\beta_1)^2$ is equivalent to the statement that every graph of type α has either a complete subgraph of type β_0 or an independent subset of type β_1 is indeed correct. (The alleged counterexample proposed in the original review can be shown to have an independent subset of type ω^2.)

80h:10039ab: **Ihara, Yasutaka**
In line −12 "$((X^*/X)/P^*)\in\mathrm{Gal}(X^*/X)$" should read "$((X^*/X)/P^*)\in\mathrm{Gal}(X^*/X)\simeq\Gamma/\Gamma^*$". In line −18 "$(x,x^2)$" should read "$(x,x^q)$".

80h:90008: **Gould, H. W.**
In line −6 "Ph.D. Thesis" should read "M.S. Thesis".

80i:10034ab: **Jacquet, Hervé**
All references to "Hervé" should read "Jacquet". The reference to the paper on "Base Change" should read "[P. Gerardin and J.-P. Labesse, *Automorphic forms, representations and L-functions* (Proc. Sympos. Pure Math., Oregon State Univ., Corvallis, Ore., 1977), Part 2, pp. 115–134, Proc. Sympos. Pure Math., XXXIII, Amer. Math. Soc., Providence, R.I., 1979]". In the penultimate line of the third paragraph from the end "other" should read "outer".

80i:20034: **Gale, D. [Gale, David]; Tamura, T.**
The bracketed form of the first author's name should read "[Gale, Deborah]".

80i:83032: **Horák, M.**
In the heading "no. 1" should read "no. 3".

80i:90032 to 80i:90047
The entire contents, except for the top line, of pages 3705 and 3706 should be exchanged.

80j:03083: **Guaspari, D.**
In the penultimate line of the second paragraph "a presentation" should read "another presentation".

80j:20037: **Skopin, A. I.**
In line 6 "$a\in(T,T)$" should read "$a\in[T,T]$". In line 7 "$a(y,x)$" should read "$[a,[y,x]]$".

80j:30007: **Blambert, Maurice; Parvatham, Rajagopalam**
The second author's name should read "Parvatham, Rajagopalan".

80j:73033: **Valedinskiĭ, V. D.**
In line 4 "$(N=1,2)$" should read "$(N=2,3)$".

80j:76009: **Sattar Gazdar, Abdus**
The author's name should read "Gazdar, Abdus Sattar".

80j:80006: **Engle, W. G.**
The author's name should read "Engel, W. G."

80k:18001: **Rotman, Joseph J.**
Some of the language used in the original review is not standard and some of the statements are a bit misleading.

This book gives a treatment of homological algebra which motivates the subject in terms of its origins in algebraic topology. Tor and Ext are developed and various special kinds of rings and modules are studied, but the author has been very careful throughout to keep the subject in perspective in a number of ways which include, for example, tracing the development of terminology, supplying many examples where homological methods have been used to solve rather down-to-earth problems which are intractable from other points of view, and maintaining a level of generality which, while sufficient for the vast majority of applications, is not so great so as to overwhelm the novice. A great deal of solid, satisfying mathematics is presented. Applications to commutative algebra are particularly abundant, among them unique factorization in regular local rings and the rather recent Quillen-Suslin proof that finitely generated projective modules over a polynomial ring over a field (or principal ideal domain) are free. For pedagogical reasons, there is a separate chapter on group extensions which precedes, by quite a bit, the chapter on cohomology of groups. The book concludes with a reasonably comprehensive but readable treatment of spectral sequences, with numerous applications.

80k:20057: **Aĭenštat, A. Ya. [Aĭzenštat, A. Ja.]**
The unbracketed form of the author's name should read "Aĭzenštat, A. Ya."

80k:53010: **Mikljukov, V. M.**
In the last line "Theorems 2 and 5" should read "Theorems 3 and 5".

80k:53094: **Klimentov, S. B.**
In the title "of the family" should read "of genus".

80k:68008: **Moravec, A.**
81a:68043: **Michálek, J.**
In the heading "no. 1" should read "no. 5".

80m:34020: **Offei, D. N.**
In the heading the journal line should read "Afrika Mat. **2**, no. 1, 3–11 (1980)".

81a:00018: **Derrida, Jacques**
The publisher line should read "Nicolas Hays, York Beach, Maine; distributed by Samuel Weiser, Inc., York Beach, Maine".

81a:60071: **Popov, N. N.**
The title should read "Geometric ergodicity of Markov chains with an arbitrary state space".

81a:93088: **Hadidi, M. T.; Schwartz, C.**
The second author's name should read "Schwartz, S. C."

81b:20019: **Syskin, S. A.**
The following remarks should be appended to the published review:
"The proofs of Theorems 2 and 3 use standard arguments. Let the group G satisfy the conditions of Theorem 1. The author proves that for every 2-local subgroup H of G, $F^*(H)=O_2(H)$, that H is thin (i.e. the Sylow p-subgroups of H are cyclic for $p\neq 2$), and if H is not solvable, then $H/O_2(H)$ is isomorphic to $L_2(p)$, where $p>7$ is a prime, $L_2(2^m)$ or $Sz(2^m)$. He also shows that if the centralizers of all involutions in G are solvable then all 2-local subgroups are solvable and he applies a result of Z. Janko [J. Algebra **21** (1972), 458–517; MR **50** #10052]. If $C(t)$ is not solvable for some involution t in G and T is a Sylow 2-subgroup of G, then the center of the Thompson subgroup $J(T)$ is strongly closed in T. The theorem of D. Goldschmidt [Ann. of Math. (2) **99** (1974), 70–117; MR **49** #407] completes the proof of Theorem 1."

81b:30061: **Kamynin, I. P.**
In lines 6 and 9 "index" should read "exponent".

81b:41051: **Golitschek, M. V.**
The author's name should read "v. Golitschek, M."

81b:53001: **Proceedings of the IV International Colloquium on Differential Geometry**
The publisher line should read "Universidad de Santiago de Compostela, Departamento de Geometria y Topologia, Santiago de Compostela".

81b:58042: **Sjöstrand, J.**
In line 10 "$\Omega\times\dot{R}^N$" should read "$\Omega\times R^N$". In line 18 after "possesses a positivity property" add "in some sense". In line 19 "$I(a,\varphi)=I(b,\psi)$" should read "$I(a,\varphi)=I(b,\psi)\bmod C^\infty$".

81b:60011: **Truhina, Ĭ. P.**
In line −5 "common" should read "simple".

81b:68055: **Ružička, Peter**
In the heading "(Czech and Russian summaries)" should read "(Slovak and Russian summaries)".

81c:10051: **Thurnheer, Peter**
A full proof of the author's generalization of the Wiener-Ikehara theorem appears elsewhere.

81c:14001: **Coste-Roy, M. F.; Coste, M.**
A large portion of the authors' introduction was inadvertently omitted. Replace the text by the following review:
"The real-étale topos of a ring A stands in the same relation to the "classical" étale topos as real-closed fields do to separably closed fields; that is, its points correspond to real strict localizations of A (=ind-étale A-algebras which are Henselian local rings with real-closed residue fields), and the topos itself contains a ring which is the generic real strict localization of A. Unlike strict localizations, real strict localizations of A do not admit any nontrivial A-algebra automorphisms; this prompted G. C. Wraith to conjecture that the real-étale topos should always be spatial (that is, equivalent to the topos of sheaves on a topological space). In an earlier paper [*Topos theoretic methods in geometry*, pp. 37–100, Aarhus Univ., Aarhus, 1979; MR 80m:14002] the authors proved this conjecture in the case when A is the coordinate ring of a real affine curve; here they extend their proof to an arbitrary ring A, using an idea suggested to them by A. Joyal."
Peter T. Johnstone (Cambridge)

81c:16040: **Fox, Thomas F.**
The final sentence should read: "This generalizes the original theory."

81c:32055: **Fujicki, Akiri**
The editors regret that lines 19–23 and lines 30–32 of the second column of the original review appeared incorrectly. Replace lines 19–23 by the following:
"integers modulo a prime p (see also a paper by A. Białynicki-Birula [Bull Acad. Polon. Sci. Sér. Sci. Math. Astronom. Phys. **22** (1974), 1097–1101; MR **53** #13228] for a version covering algebraic actions of the multiplicative group of an algebraically closed field, $\mathbb{Q}$, of arbitrary characteristics on a smooth scheme proper over $\mathbb{Q}$). The".
Replace the final sentence of the first paragraph by:
"The stronger version, among other things, shows that there is an analytic base of $H_*(X(\mathbf{C}^*), \mathbf{Z})$ if and only if there is an analytic base of $H_*(X, \mathbf{Z})$."

81c:46001: **Lindenstrauss, Joram; Tzafriri, Lior**
The reference to Volume 1 should read "[*Vol. I*, Ergebnisse der Mathematik und ihrer Grenzgebiete, 92, Springer-Verlag, Berlin-New York, 1977; MR **58** #17766]".

81c:46031: **Kecs, Wilhelm**
The reviewer wishes to remark that the comment concerning $\mathrm{Supp}(f+g) \subset \mathrm{Supp} f \cup \mathrm{Supp} g$ is due to a misunderstanding and the proof on page 29 is correct as it stands.

81c:47010: **Nordgren, E.; Radjabalipour, M.; Radjavi, H.; Rosenthal, P. [Rosenthal, Peter]**
In line 1 "The first result" should read "The first main result".

81c:65027: **Potra, Florian A.; Pták, Vlastimil**
The reviewer wishes to make the following corrections to the original review: replace "in a complete metric space (X, d)" by "in a Banach space X"; replace "$d(x_n, x^*)$" by "$\|x_n - x^*\|$" and replace "$d(x_n, x^*) \leq \beta(d(x_n, x_{n-1}))$" by "$\|x_n - x^*\| \leq \beta(\|x_n - x_{n-1}\|)$".

81d:32020: **Adkins, Williams A.**
The author's name should read "Adkins, William A."

81d:32035: **Sibony, Nessim; Wong, Pit Mann**
In line 8 "holomorphic function" should read "bounded holomorphic function".

81e:01007: **Hamadanizadeh, Javad**
The title should read "The trigonometric tables of al-Kāshī in his *Zīj-i Khāqānī*".

81e:32002: **Gopala Krishna, J.**
In line 2 "$\Sigma_{k \in \mathbf{Z}_+^n} Z^k$" should read "$\Sigma_{k \in \mathbf{Z}_+^n} a_k Z^k$". In line 7 the equation "$Q(\omega) = Q$" should read "$Q(\omega) = Q'$" in both instances.

81e:41028: **Vjačeslavov, N. S.**
The following phrase was inadvertently omitted from the end of the review: "(b) if α is a rational number, then $L_p R_n(x^\alpha) < c(\alpha, p) n^{1/2p} \exp\{-2\pi\sqrt{\alpha + 1/p}\,\sqrt{n}\}$, $n = 1, 2, \cdots$".

81e:42028: **Skopina, M. A.**
In line 8 "$+O(1/n^2)$" should read "$+O(1/n^r)$". In line 14 "$(1-\varphi(x))/x^2$" should read "$(1-\varphi(x))/x^r$".

81e:53007: **Šifrin, M. A.**
In line 10 "covariant" should read "Pfaffian".

81e:68013: **Brand, Daniel**
In the penultimate sentence "inducting for errors defined" should read "induction hypotheses different".

81e:62015: **Mathai, A. M.; Rathie, P. N.**
In line –2 "μ functions" should read "H functions".

81f:03055: **Matijasevič, Ju. V.**
In the fourth paragraph the reference to MR **58** #5124 should have noted the published erratum to that review, namely, in line 2 of the review, "polynomials" should read "exponential polynomials".

81f:30034: **Kaliničenko, L. I.**
In line 5 "$F^{\langle k \rangle}(z)$" should read "$F^{\langle k \rangle}(\lambda_k)$".

81f:35034: **Ezin, J. P.**
In the heading the journal line should read "Afrika Mat. **2**, no. 1, 71–92 (1980)".

81f:65033: **Jackson, David D.**
In line 8 of the second column "$x_h = H_y$" should read "$x_h = Hy$".

81g:10049: **Šidlovskiĭ, A. B.**
The last sentence should read:
"The estimations of the measures for subsets of E-functions in the case when the initial finite set of E-functions is algebraically independent over $\mathbf{C}(z)$ are indicated."

81g:58017: **McKean, H. P.**
The reviewer of this article is G. Wilson (Oxford).

81g:60070ab: **Lotov, V. I.**
In lines 2–3 delete the sentence "It is assumed that $E[\lambda^{\xi_1}; \xi_1 > 0]$

is a rational function". In the last line "ibid. **24** (1979), no. 4, 876–881 (1980)" should read "ibid. **24** (1979), no. 4, 869–876 (1980)".

81g:73007: **McNiven, Hugh D.; Mengi, Yalcin**
Delete "$=0$" at the end of equation (3).

81i:03070: **Gončarov, S. S.**
In lines 2, 3 and 8 "lattice" should read "structure". In the last line the paging of the English translation should read "411–414".

81i:68027: **Schmidt, Gunther**
In line 4 "v-incidence" should read "$\vee$-incidence". In line 10 "$\mathfrak{B}_{v,R}=\{S;\ S$ is v-incident with $R\}$" should read "$\mathfrak{B}_{\vee,R}=\{S;\ S$ is $\vee$-incident with $R\}$".

81j:26010: **Longinetti, Marco**
In line 4 "quasiconvexity" should read "quasiconcavity".

81j:60012: **Mihaĭlov, V. G.**
In line −2 "$\mathrm{Var}\,\mu_0$" should read "$D\mu_0$".

81j:60020: **Januskjavicjus, R. V. [Januškevičius, R. V.]**
In line 2 "$\delta^2<+\infty$" should read "$\sigma^2<+\infty$". In line 5 "$(0,\delta)$" should read "$(0,\sigma)$".

81k:03016: **Bergstra, Jan; Klop, Jan Willem**
In line −12 "$BT(M)$ is finite, where $BT(M)$ is the Bohm tree of a term M" should read "$BT(M\circ N)$ is finite, where $BT(P)$ is the Böhm-tree of a term P".

81k:81047: **Garber, W. D.**
In line 4 "there is no mass gap" should read "there is a mass gap".

Mathematical Reviews Cumulative Index 1973—1979

VOLUMES 45 THROUGH 58 OF MATHEMATICAL REVIEWS

This index is available in twelve 9 x 12 inch volumes on acid-free paper or on approximately 85 standard 105 x 148mm diazo film microfiche.

Any institution that has purchased the index on either paper or microfiche at regular prices can purchase a second copy on microfiche for $535.

The CUMULATIVE INDEX has the same form as the Annual Index for 1979 as it was generated by the same computer program.

The first part, an **Author and Key Index**, contains 4,860 pages in seven volumes. The entries give full bibliographic information about all items that have been reviewed in MR between January 1973 and December 1979, inclusive. This is over 230,000 entries. In addition, there are entries for about 3,000 items not reviewed in MR for which the editors think bibliographic information should be made available. These have been treated exactly as reviewed items, generally with references to **Zentralblatt für Mathematik, Referativnyi Žurnal**, or other reviewing journals.

Items are listed alphabetically by author, those having several authors are listed in full under each author. Surnames of authors are cross-referenced for name changes or variations of spelling. The original entry for which an erratum or other commentary has been reviewed in a subsequent entry is identified.

The author index section is estimated to have about 300,000 entries because of muitiple authors.

In the **Author Index** the names of persons associated with an item in a capacity other than that of author, e.g., editor, translator, subject of a biography, are also listed.

The **Key Index** section of the author index consists of all items for which there is no clear author and is about 70 percent cross-referenced included are proceedings of meetings, tables, obituaries, biographies, etc.

The entries under a given heading (i.e., the author or a title) are listed in order of publication dates. Co-authored items are treated on the same basis as those by the author alone.

The **Subject Index**, consisting of about 380,000 listings on 3,555 pages, in five volumes, cover all subject areas as classified by MR. For each item there is one full listing in each subject area in which it has been classified, with all authors, title and MR number, if any. Cross-references are given under each author after the first to the original listing.

The arrangement of each title entry is that of the heading of the original review in MR. Titles in English, French, German, and Italian are usually given as they appeared in the original. Articles in other languages are given in English translation.
